## Clinical Guidelines

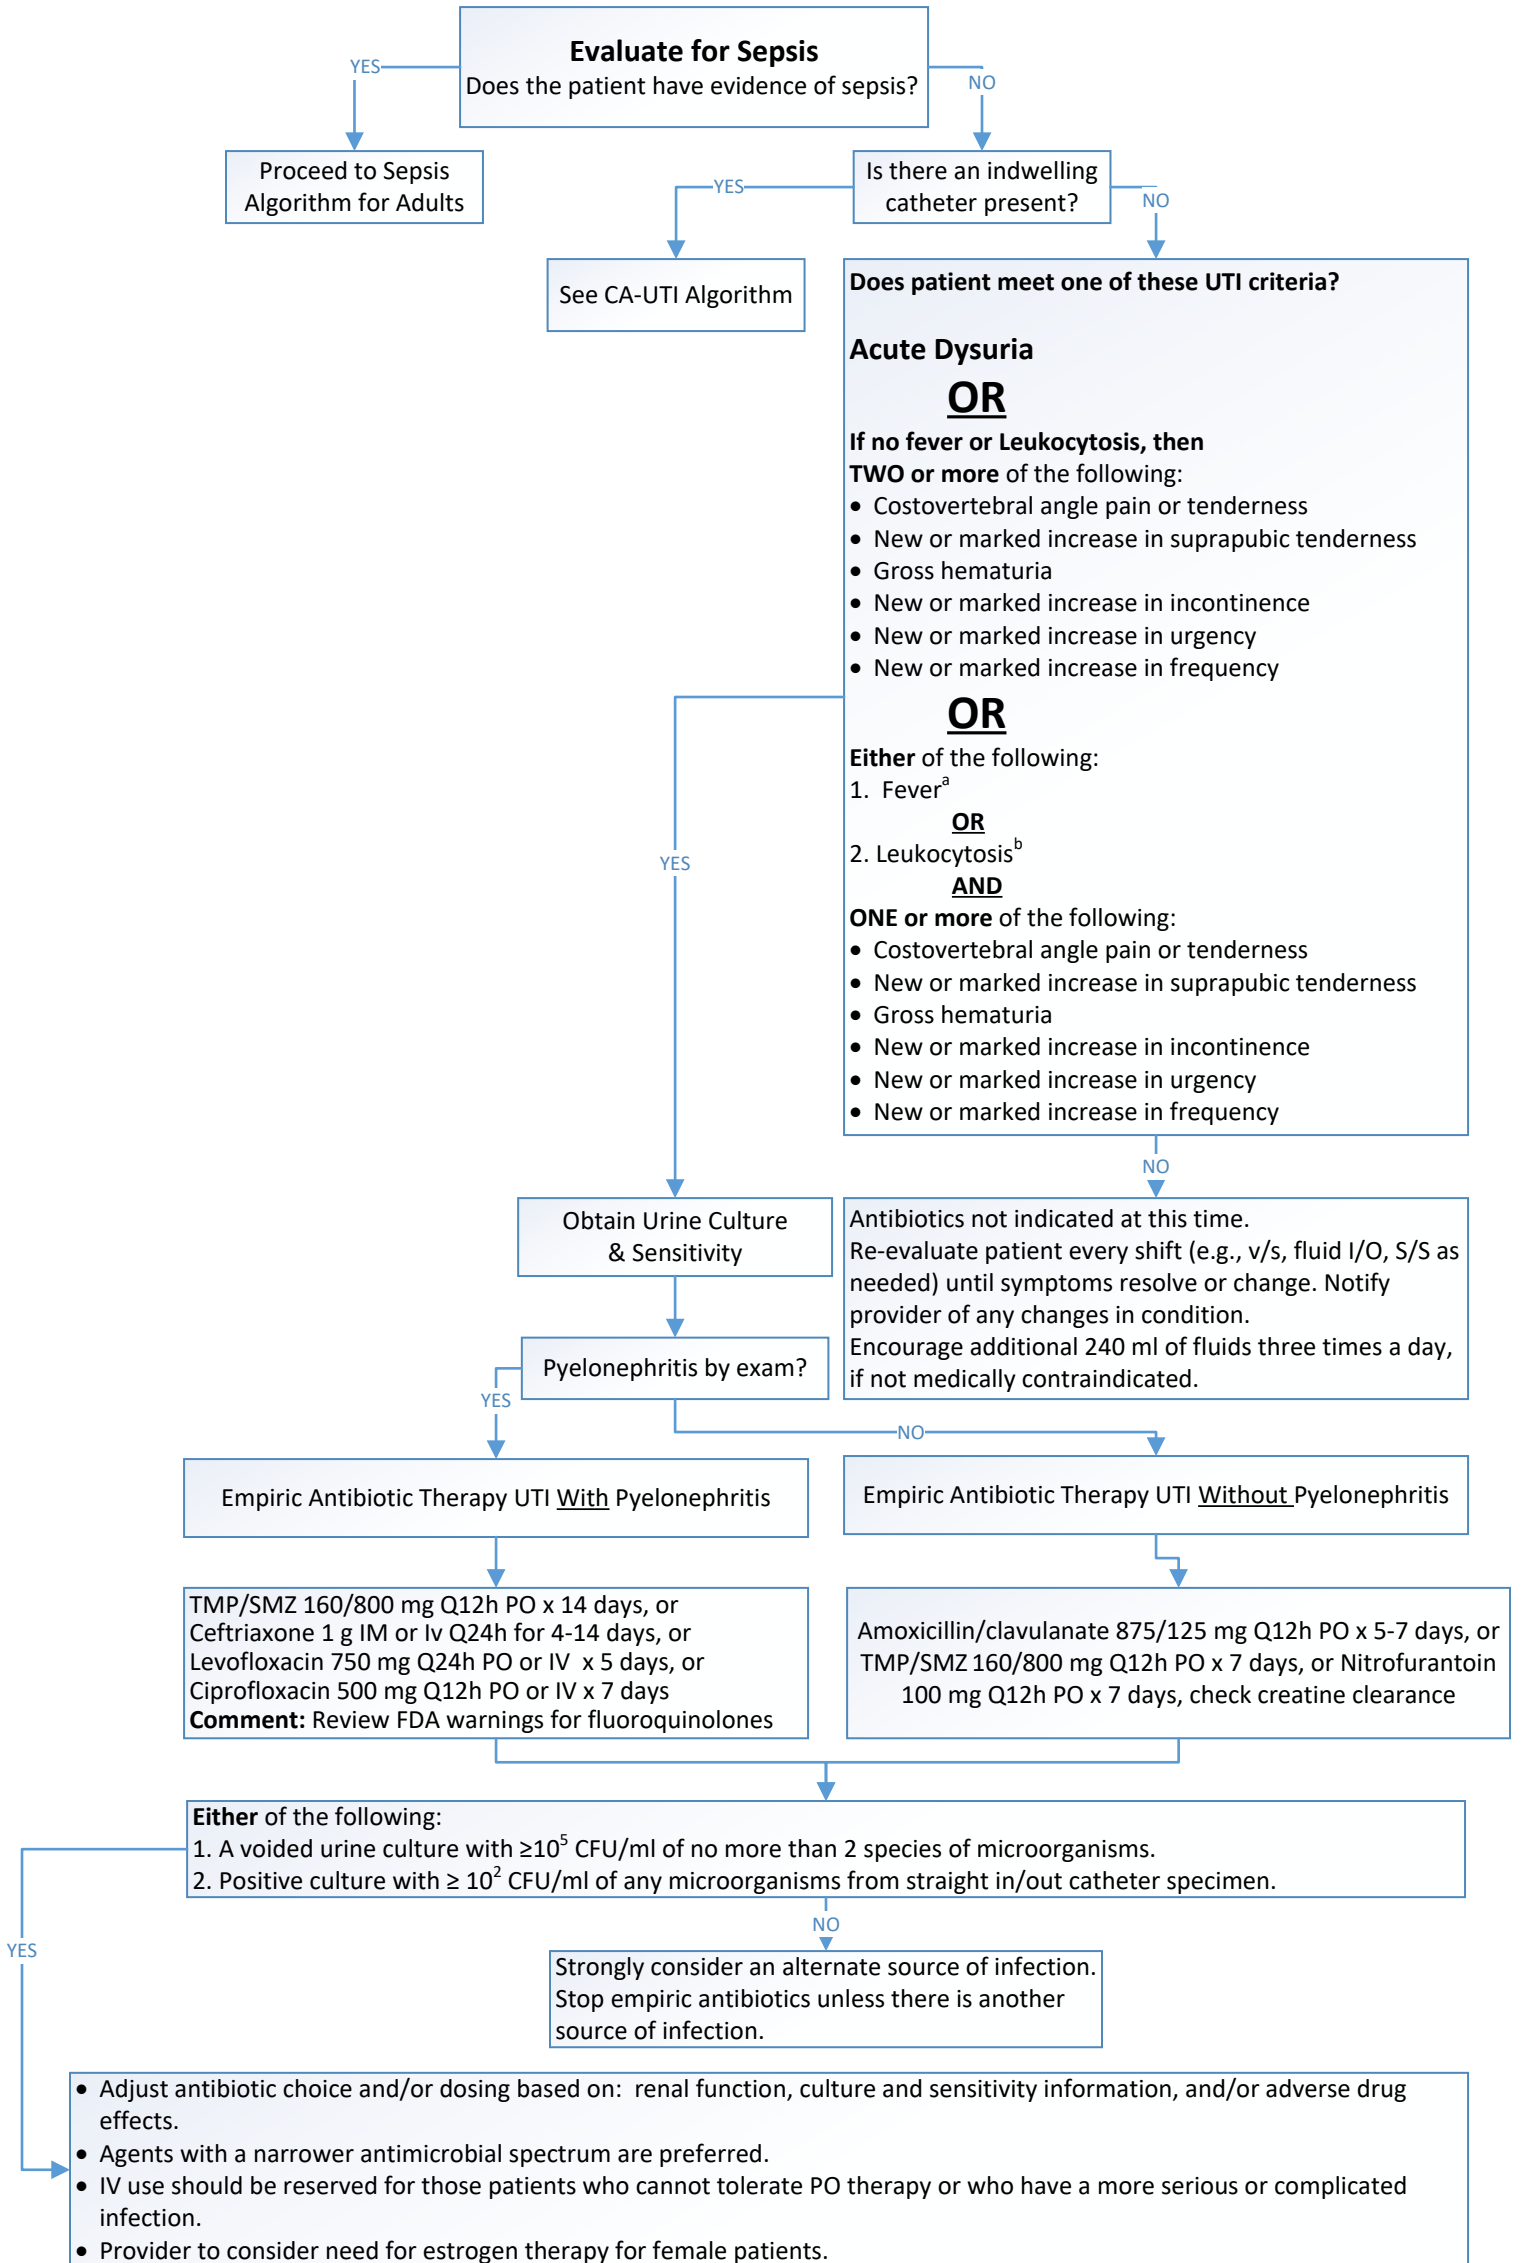

Guideline Title: UTI Algorithm- Patient Without Indwelling Catheter

Purpose: To assist with evaluation and management of a UTI for patients without indwelling catheter.

Guideline is intended to help inform clinical practice and is not intended nor should it be utilized to establish a standard of care. In addition, it is understood that every patient and every clinical circumstance is unique and individualized. Therefore, the provider should apply their own clinical judgment to the specific factors presented in determining the most appropriate care to be delivered to any particular patient.

Scope: Post-Acute Clinicians

## UTI Algorithm – Patient Without an Indwelling Catheter

<sup>a</sup>Fever: Single temperature  $>100^\circ\text{F}$ , or  $99^\circ\text{F}$  on repeated occasions, or an increase of  $>2^\circ\text{F}$  over baseline <sup>b</sup>Leukocytosis:  $>14,000$  cells/ $\text{mm}^3$ , or Left shift  $>6\%$  or 1,500 bands/ $\text{mm}^3$
