

We understand the value of partnerships across the care continuum to improve outcomes, deliver a higher level of care coordination and reduce readmission rates.

As post-acute facilities continue to face the residual impact of the pandemic, and continually changing state and federal regulations, Adfinitas Health is one of the few hospitalist groups to also provide experience in post-acute nursing and extended-care facilities. Highly skilled Adfinitas physicians and advanced practice providers (APPs) in our Post-Acute Services team care for patients in a variety of post-acute care settings including;

Long-term care centers

Inpatient rehabilitation facilities

Skilled nursing facilities

Nursing homes

Assisted living and continuing care retirement communities

Adfinitas Health care teams work diligently to meet the specific needs of our acute-care partners to fulfill their operational and clinical goals. Our board-certified providers serve as Medical Director at over 50% of our acute-care partner facilities to have a meaningful impact on care management based on:

Decade of Experience in Post-Acute Care

Over 14,000 patient encounters each month

69 diverse facilities

Improving Preventative Measures

Reducing readmissions between acute and post-acute facilities

Providing safe and effective transition of care

“Adfinitas Health physicians, nurse practitioners, and physician assistants are consistently present in the facility throughout the week, assuring patients are seen and assessed promptly, an integral part of successfully managing medical issues. This team presence in the facility not only heightens medical vigilance; it also secures enhanced dialogue between physician, nursing staff, resident, and family - a gold standard in healthcare. Truly this is a model that is ahead of its time!”

Philip J. Gordon Sr. NHA, Administrator, Crofton Care & Rehabilitation Center
